Lakewood ezMaps Toolbars & Instructions

Lakewood ezMaps was designed as a building block for an evolutionary web-based City service of providing land-based data to the public. Founded on simplicity and efficiency, the City will add other information sets over time to create a portal of geographic data, specific to Lakewood.

Sample Screen from Lakewood ezMaps

Search

Address Information

Search: Start by entering the address number (i.e. for 445 S Allison Pkwy, just enter 445), use the return key or click the "GO" button, and then select from the address list. ***Do not use any type of punctuation in the address search such as periods or commas.***

Zoom

Zoom: When using the zoom tools, first click on the desired tool, and move the cursor over the map and click to use the selected tool. The "zoom in" function will allow you to display the map information at a large scale and the "zoom out" function will allow you to display the map information at a smaller scale.

Identify

Identify: Identify will allow you to display information about property specifics such as parcel address, city, state, zip code, *schedule number, elementary school, middle school, high school, and city council ward.

*The Schedule number is an arbitrary number assigned to a parcel by Jefferson County. The county will attach tax information associated with a parcel using the schedule number.

Refresh

Refresh: Refreshing the screen will zoom out to the entire City boundary, as if you were starting over.

Pan

E

Pan: Click on the directional arrows to pan in the desired direction.

Print

Print: This option allows you print the map plus the attached information. A preview screen is provided before you print.

Why You Need Macromedia Flash Player

Software applications, such as Lakewood ezMaps, built in Macromedia Flash are faster, more scalable and require shorter "load time". After you update to the required Flash Player, you may be required to reboot your PC. Macromedia's Flash download page will advise you when the download is complete.

Visit http://www.macromedia.com for your free Flash Player download.

Lakewood ezMaps has a built-in feature that will check your computer system to verify if the current version of Flash Player is installed. The Flash Version is shown in the bottom window (i.e. WIN 7,0,14,0). If the correct Flash Player is on your machine, a message, located in the middle section tells you to enter the application by clicking the Lakewood ezMaps logo link.

If you do not have the current Flash Player, a link to Macromedia's Flash download web site is made available. The download should take only a few seconds to complete. You may then continue to enter Lakewood ezMaps.
