

Building Inspection Alert– Updated August 1, 2020

Inspections in occupied homes/residential units:

- Direct access to the work area is requested. This can be through a garage entrance, walk-out basement entrance, back door, or other door that limits walking through the home.
- Inspectors will request only one person (contractor, sub-contractor, homeowner) accompany them during the inspection

Inspections on larger projects and unoccupied homes/residential units:

- Inspectors will request the floor, unit or area they are inspecting to be clear of workers. If this cannot be accommodated within a few minutes of the inspector arriving on-site, the inspection may be canceled
