Building Inspection Alert—March 23, 2020

Inspections in occupied homes/residential units:

- Will be limited to those inspections needed to move projects forward (for example, rough plumbing, rough electrical, framing, drywall), AND if access to the work area is directly from the outside
- Inspectors will request only one person (contractor, sub-contractor, homeowner) accompany them during the inspection
- Final inspections and inspections that require walking through the home will be delayed until the general risk level is reduced

Inspections on larger projects and unoccupied homes/residential units:

- Inspectors will request the floor, unit or area they are inspecting to be clear of workers. If this cannot be accommodated within a few minutes of the inspector arriving on-site, the inspection may be canceled
